Ho Chi Minh City, Vietnam ◊ +84 986103378 ◊ truongnh2802@gmail.com ◊ linkedin.com/in/truongnh28

SUMMARY

I am a Software Engineer at Zalopay with experience in designing and building platform architecture, CI/CD systems, distributed infrastructure, and high-concurrency environments. I have a strong background in distributed systems, event-driven architectures, and AI enablement initiatives, with a proven track record of architecting scalable platforms and driving engineering productivity improvements.

EDUCATION

Ho Chi Minh City University of Technology (HCMUT) Master of Engineering in Computer Science, GPA: 8.0/10	Dec 2024 – Present
Posts and Telecommunications Institute of Technology (PTIT) Engineer's Degree in Information Technology, GPA: 3.31/4.00	Sep 2019 – Jun 2024

EXPERIENCE

Zalopay - VNG Corporation <i>Software Engineer</i>	May 2022 – Present <i>Ho Chi Minh City</i>
• AI Automation: Architected & deployed a multi-agent ticket processing system via a LangGraph state machine. Processed 32K+ tickets with 80.1% automation rate, peaking 99.8% for IBFT. Designed 9+ smart workflows (IBFT, promotions, reopen handling) with LLM intent classification. Slashed handling time 4x faster, saving the CS team 187 hrs/mo. • Innovation & AI: Researched and implemented an OCR-based solution for the customer support team, reducing processing time by 99% for over 25,000 cases monthly. Designed and built an AI-powered service using LLM and RAG to automate query resolution for over 5,000 queries monthly, grounding responses in company data to improve support efficiency. • CI/CD: Architected and maintained a Kubernetes-native CI/CD platform serving 30+ engineering squads and 200+ developers. Orchestrated 1,500+ daily pipelines for 1,500+ microservices with an average build time of 5 minutes, enforcing security and quality gates (SonarQube) to significantly reduce release-related human errors. • Gateway: Engineered a high-performance Ratelimit platform handling 10k RPS with sub-millisecond latency using the Apisix ecosystem. Built the CAS platform — a centralized authentication system securing 50 internal tools, ensuring high availability and a robust security posture for administrative services. • Private Cloud (SaaS): Developed a self-service infrastructure platform managing 1,500+ middleware resources, including 1,300+ Kafka topics, 110 Redis clusters, 100+ MySQL clusters and 10+ ETCD clusters. Reduced infrastructure lead time from 3 days to 5 minutes, enabling autonomous scaling for product teams. • Mentoring & Knowledge Sharing: Mentored junior engineers through technical challenges and code reviews. Organized monthly knowledge-sharing sessions to foster a culture of continuous learning and engineering excellence.	
Zalopay - VNG Corporation <i>Fresher Software Engineer</i>	May 2022 – Aug 2022 <i>Ho Chi Minh City</i>
• Competitive Selection: Selected from over 2000 applicants in the VNG Tech Program 2022 through a rigorous process including technical entrance tests and mentor interviews.	

SKILLS

Programming	Golang, Python.
Databases	MySQL, Redis, Etc.
Technologies	K8s, Docker, Apisix.
Methodology	Agile/Scrum.

HONORS & AWARDS

Zalopay Hackathon Champion	2025
2nd Runner-up Hack 2023	2023
Participate in The 2021 ACM/ICPC	2022
Second Prize PTIT ICPC	2022
